

# Smart Template Resources

Thursday, October 25, 2018 12:08 PM

POC: David Alt, MD (david.a.alt2.mil@mail.mil)

*Italics are used to highlight specific Cerner terminology. Knowing the right term to search for is half the battle!*

## Getting Started

*Smart Templates* display refreshable data in a variety of settings. They are useable in *Dynamic Documentation*, *PowerNotes*, *PowerForms*, *Clinical Notes*, *Gen Views*, *Mpages*, *laware*, *Message Center*, and *Hospital Wide Discharge Process Summaries*. Although written in Cerner Command Language (CCL), they can also be created with a wizard.

## Creating Smart Templates With the Wizard

The Smart Template Wizard is a tool for creating smart templates using Bedrock (bedrock.exe) by answering a set of questions and providing information for items such as headers, as opposed to having to write CCL.
