

Tip Sheet

How to Access Legacy, VA, and Community data in JLV *as of 18 Oct 2018*

All patient person data used within MHS GENESIS training materials and associated courseware is fictional. Therefore, no protected health information (PHI) or personally identifiable information (PII) is contained within these materials and associated courseware. (Font Arial, Size 7)

OVERVIEW

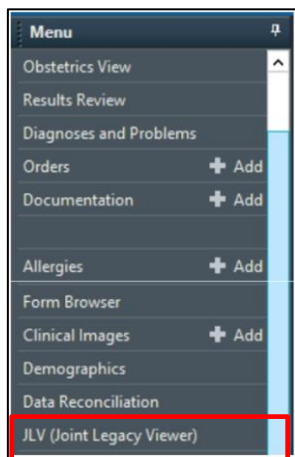

The purpose of this tip sheet is to ensure providers understand how to easily access relevant legacy data in Joint Legacy Viewer (JLV).

Post MHS GENESIS Go-Live, providers at the live Military Treatment Facility (MTF) will use JLV as the primary means to access DoD legacy data (e.g., AHLTA, Essentris®, CHCS), Veterans Affairs data, and Civilian data for organizations that DoD has an agreement with. JLV is a health information portal that provides a read-only, integrated view of patient health data from the DoD, Department of Veterans Affairs (VA), and private sector partners in a single display. JLV is available to DoD users in both AHLTA and MHS GENESIS.

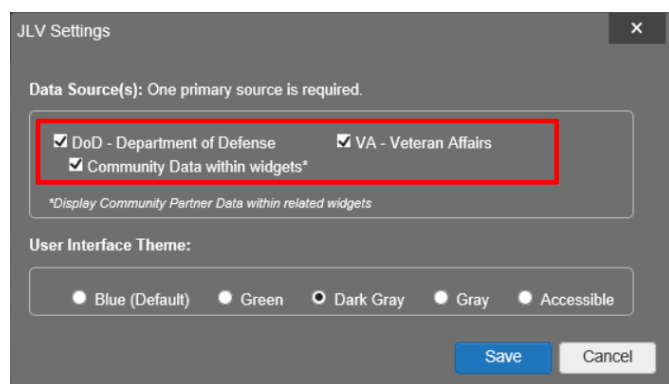

How to Access Legacy Data, VA, and Community data via JLV

Dynamic Documentation (Bolded text and underline for the topic)

1. To access JLV, select the JLV hyperlink at the bottom Left-hand corner of the **Dark Menu** (TOC) in PowerChart®. By using this link, the provider maintains patient context, and can open a patient's record in the JLV read-only viewer in an internet browser

2. In the internet browser that launches when you select JLV, select the settings icon in the upper right corner
3. Ensure that DoD, VA, and Community Data are selected and select **Save**

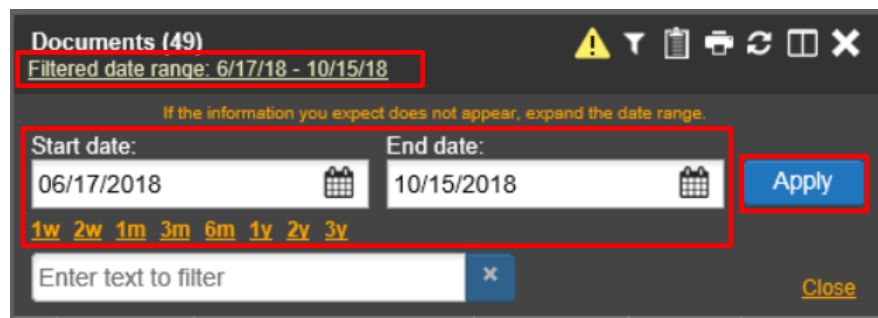

How to Access Legacy Data, VA, and Community data via JLV

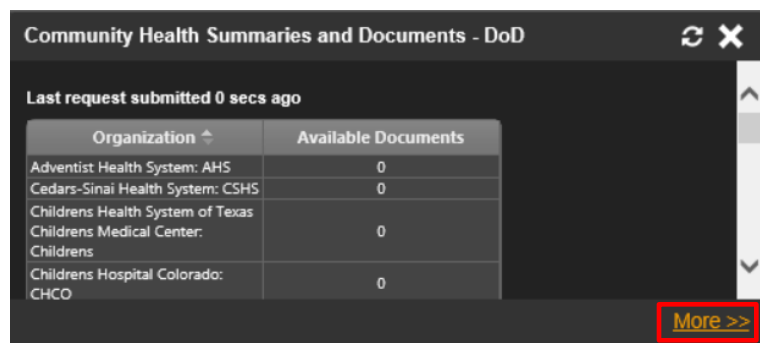

- Data in JLV is organized in widgets that can be configured to accommodate users' daily patient care routines, and can create efficiencies and enhance the data review process. It is recommended that users have limited widgets on their personal JLV landing page tab in order to reduce the time required to load data when accessing JLV. Widgets in JLV include the following:

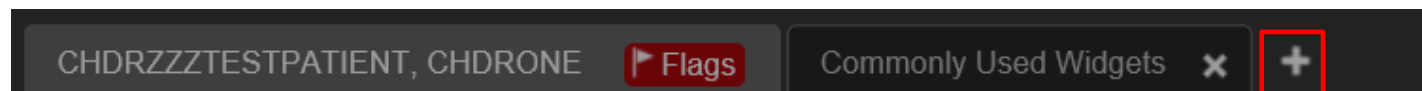

- Within each widget, modify the time frame for data review by changing the **Start date** and **End date**, or by selecting one of the optional pre-set time frames

- Select the **More>>** hyperlink to expand the widget view.

- Select the hyperlink within the widget display window to view specific documents or results. The document will open in a separate window. The document can be viewed, printed, or added to the Report Builder. Additionally, users can copy and paste to the clipboard for future reference (e.g., copy and paste into your MHS GENESIS Dynamic document)
- Users can streamline their daily workflow through the use of personalized Tabs; in the Patient Portal section of JLV, select the **+** sign to add a new Tab.

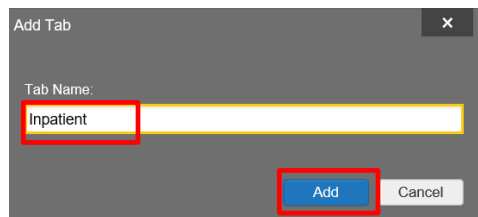

Department / Division

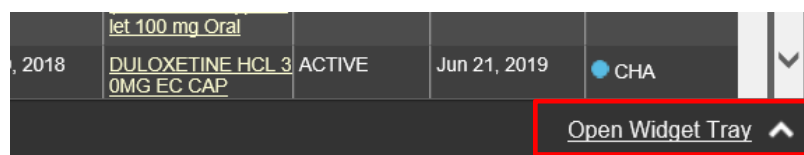

MHS GENESIS

How to Access Legacy Data, VA, and Community data via JLV

9. Under **Tab Name**, title the tab to associate it with a personalized desired workflow process (e.g., physicals, preop, etc.).

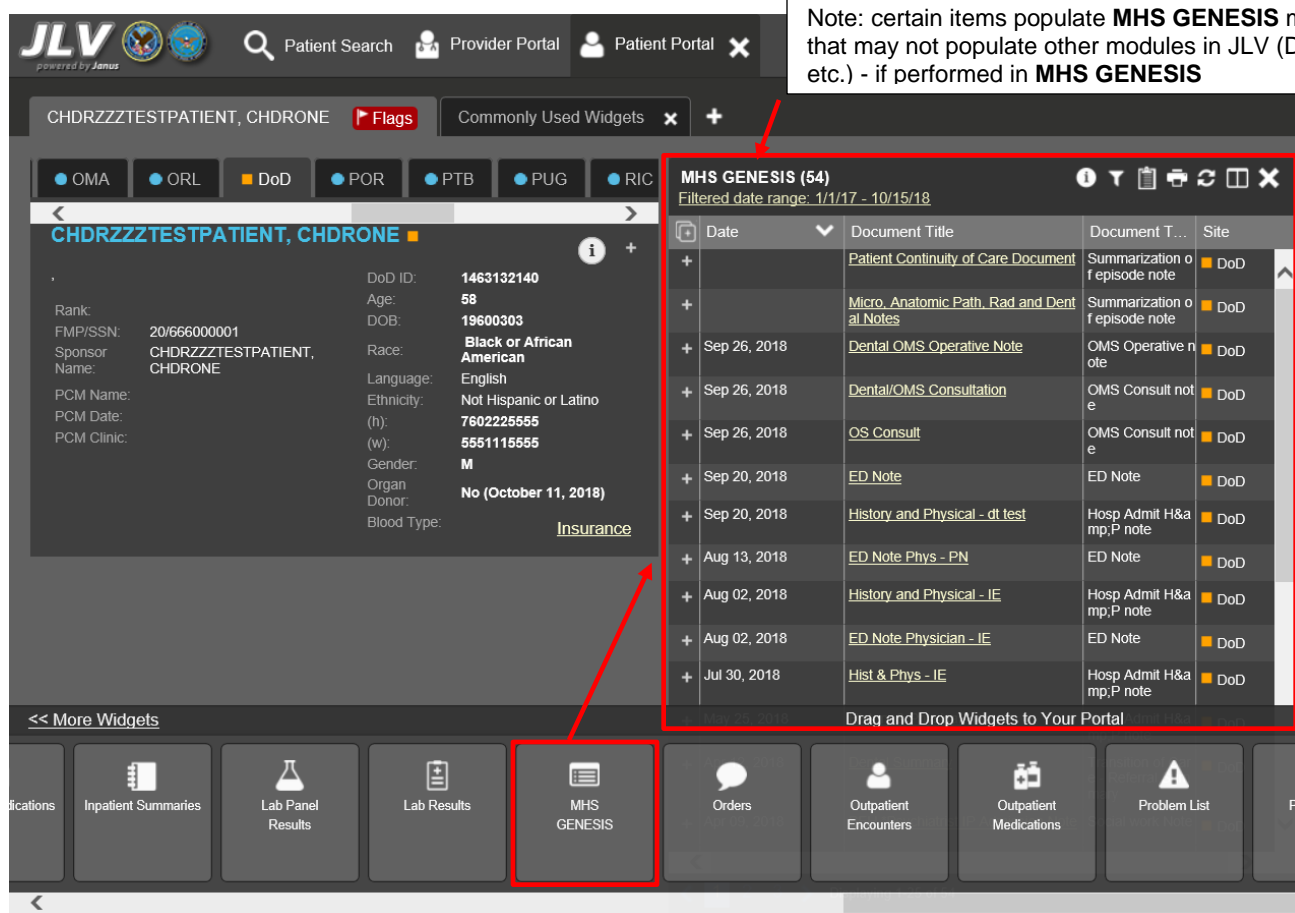

10. Add the desired widgets to your personalized tab. To add widgets, select **Open Widget Tray** at the bottom right corner of the JLV window

11. In the widget tray, click and drag the desired widgets onto the tab; users can arrange widgets in any order on the tab by clicking and dragging each widget to a new location

Note: Keep in mind, the greater the number of widgets loaded to a tab, the longer it will take the data to load when that tab is opened. The Documents widget takes the longest to load due to the volume of data pulled from multiple sources

Note: certain items populate **MHS GENESIS** module in JLV that may not populate other modules in JLV (Documents, etc.) - if performed in **MHS GENESIS**
